Common \$ents Bred Heifer Classic

Alliance Verified

The purchase of replacement heifers from herds that are superior for genetics, health and management for development through the Common \$ents Bred Heifer Classic provides a tremendous opportunity to infuse replacements into Illinois cowherds. However, it is imperative that those individuals purchasing these heifers know something about their background.

Two avenues to enter heifers into the Common \$ents Bred Heifer Classic —

- **Home Raised** – Commercial cow-calf producers or purebred breeders that grow and develop their own heifers from birth through the five steps of the Common \$ents Bred Heifer Classic.
- **Alliance Verified** – Individuals purchasing heifers for development for the Common \$ents Bred Heifer Classic must complete an affidavit covering those items listed as “Required Information” on this form. These heifers should not be multiple small groups of heifers put together for merchandizing as replacement heifers. For the potential purchaser it is important that they know something about the heifers birth date, sire, health, performance, etc. Also, knowing something about the health background of the cowherd that produced the heifers will reduce the chance of disease pathogens entering into their herds.

Therefore, the Common \$ents Bred Heifer Classic “Alliance Verified Form” was developed so potential purchasers of these heifers have increased knowledge about the background herd where the heifers were bred and raised. Also, it provides the opportunity for the potential purchaser to visit with the original herd owner and their practicing veterinarian to increase the chances of the heifers matching their level of management and nutrition.

REQUIRED INFORMATION ---

1. Name of “Present Owner” of heifers (individual developing through Common \$ents Bred Heifer Classic)

Name _____ Address _____
Town _____ Phone _____

2. Name of “Individual who Bred and Raised” the heifers

Name _____ Address _____
